

COVID-19 Priority Response

StopCOVID-19@newageindustries.com

In brief: NewAge Industries has set up a company-wide Priority Response Team to expedite orders from customers – from receipt of the order through shipping – involving COVID-19 (coronavirus) support components.

We all know that this pandemic is rapidly changing normal practices and routines. NewAge is monitoring the CDC and local government requirements and has been recognized as a life-sustaining business. Our operations team is fully up and running, continuing to manufacture tubing, hose and components to service customers in critical industries. Over one-third of our group (those in administrative positions) is working remotely.

Our inventory of stock products is at high levels, and our raw materials supply is stable. Tubing components for COVID-19 applications involving virus detection test kits, lab work on antibodies, and respiratory equipment have recently shipped to customers.

NewAge is supplying tubing, hose and Single-Use assemblies for COVID-19 vaccine development, test kits to diagnose the virus, therapeutics to treat its resulting conditions, medical equipment such as ventilators and hospital beds, and personal protective equipment, to name a few applications. These are the orders we are ready to expedite with priority status.

We've set up a special e-mail address to receive your inquiries: StopCOVID-19@newageindustries.com. The Priority Response Team will receive your request and fast-track it, whether it's an order from stock or a custom product. We suggest that you also contact your NewAge sales representative and alert them to your request. We are here to help!
